

Handling and restraint

Ability to scruff and hold across the shoulders

The CurVet Rat

Ethical Training Simulator

Martin Heath MSc, FIAT, FIScT, R.AnTech, PTLLS and Sandra Batty MIAT

Resealable skin

Micro chipping and subcutaneous administration

Oral administration

Moveable head for correct positioning for oral dosing via catheter into the oesophagus and stomach

Reduce animal use, gain competencies

The CurVet™ Rat Training Simulator provides an ethical, realistic alternative to using live rodents for training and teaching purposes. Animal technologists, vets and scientists alike can use this replacement simulator.

CurVet Rat - application of the 3Rs

- **Replacement** - replaces the need to cull an animal to gain technical skills
- **Reduction** - may reduce the need to 'over breed' to supply live animals for training
- **Refinement** - able to practice and refine technical skills in order to gain competence.

Intramuscular administration

Hind limbs attached to pelvis allow movement

Intravenous administration and blood withdrawal

Inject, sample blood, realistic tail, two accessible tail veins, self-sealing material and removable tail

Anal orifice

For rectal thermometer with limited depth of insertion

7

key features

- Realistic dermatological skin
- Rotating head
- Moveable spine and hind legs
- Lifelike and removable tail
- Bodyweight approximately 300g
- Reservoir for blood
- Realistic features - eyes, paws, mouth, teeth, hard palate and anal orifice.
